About

I am a Software Engineer with hands-on experience in designing, developing, testing, and maintaining full-stack applications using **React**, **Git**, **REST APIs**, and **PostgreSQL**. I have built scalable, production-ready systems and contributed to real-world codebases during my internship. I use modern **AI tools** and frameworks to accelerate development, improve productivity, and enhance application capabilities. Currently, I am expanding my expertise in **AWS** to strengthen my backend and cloud infrastructure skills.

Education

Dayananda Sagar College of Engineering

Bachelor of Engineering in Information Science (8.7 CGPA)

November 2022 – Present

Bangalore, Karnataka

Little Woods School

PCM (CBSE) – Higher Secondary (85.4%)

May 2021 – April 2022

Kakinada, Andhra Pradesh

Technical Skills

Languages: Python, Java, C++, HTML/CSS, JavaScript, TypeScript, EJS

Databases: SQL, MongoDB, PostgreSQL

Developer Tools: Git (GitHub, GitLab), AWS, VS Code, Jira, Postman, Docker, PgAdmin

Libraries & Frameworks: React, Node.js, Express, REST APIs, Tailwind CSS

Experience

StackZero

July 2025 – November 2025

Web Development Intern

stackzero.in

- Resolved **front-end bugs** in a production-grade **React** codebase, using **Git** for version control and effective collaboration within a multi-developer environment.
- Designed and developed the **Dreamz Designz** website, delivering an engaging, responsive, and user-friendly interface.

Projects

Cittilenz - AI-Powered Civic Issue Reporting Platform | *React.js, Spring Boot, PostgreSQL, FastAPI*

[GitHub](#)

- Built an end-to-end civic complaint platform enabling citizens to report issues with images and GPS using **PostGIS** for ward-based routing, duplicate detection, and **SLA**-driven workflows across roles.
- Integrated AI image classification using **YOLO** and **MobileNetV2**, validated backend APIs, and contributed to responsive UI for complaint submission and issue lifecycle management.

AutoCare Hub - Vehicle Maintenance Service | *Node.js, Express, EJS, SQLite3*

[GitHub](#)

- Built a comprehensive full-stack booking platform that allows users to schedule vehicle maintenance, featuring secure user authentication via **bcryptjs**, structured user profiles, and detailed booking histories.
- Designed a clean, responsive frontend using reusable EJS components and structured the backend using a strict **MVC** architecture with modular routes, controllers, and SQLite3 models.

NewsFlow - Personalized News Aggregator | *Next.js, Fastify, PostgreSQL, Prisma*

[GitHub](#)

- Architected a full-stack news aggregator that ranks and delivers personalized content based on user preferences, reading history, and keyword-based filtering.
- Engineered a robust backend ingestion engine utilizing scheduled **Fastify** workers to reliably fetch, normalize, and store articles from multiple external APIs (Currents, GNews, NewsData) while gracefully handling rate limits.

Certifications

- The Complete Full-Stack Web Development Bootcamp** – Udemy [Certificate](#)
- AWS Cloud Practitioner** [In Progress]

Achievements

- Won the **Best Project of Social Relevance** Award at the Project Open Day for the Final Year Major Project.
- Secured **Top 2%** ranking in the NPTEL **Cloud Computing** certification exam.
